

Research Methods for Edexcel Psychology: An Activity-based Approach

This book covers everything your students need to know for the research methods and coursework modules of the Edexcel specification. It is organised into illustrated double-page spreads, with each chapter providing the equivalent of a lesson (excluding activities). The course content is delivered through research activities and self-assessment questions. Each chapter ends with practice multiple-choice questions, plus exam-style questions with model answers and examiner comments.
