

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884 edition. Excerpt: ...LIGAMENTS. from practical experience, that, if some interesting fact can be coupled with these apparently uninteresting bonds, a new and lively interest is awakened, and a healthy stimulus given to a desire for more scientific and less matter of fact knowledge in human anatomy. EXPLANATION OF PLATE XIII. Fig. 1. A thoracic vertebra of a seal (*Phoca vitulina*), showing the ligamentum conjugate costarum passing across the back of an inter-vertebral disc to join the heads of two opposite ribs. The synovial sheath is omitted in order to avoid complicating the figure. Fig. 2. A sixth thoracic vertebra, with the heads of the corresponding ribs from a foetus (human) at birth. It shows the ligamentum conjugale costarum, as in preceding figure. Fig. 3. The left femur of a very young ostrich (natural size), showing the continuity of the ligamentum tores with muscle. A. The place where the ligament is attached to the acetabulum. Fig. 4. The right knee-joint of a young orang, showing the continuity of the adductor magnus muscle, and the internal lateral ligament of the joint. Fig. 5. The right femur, tibia, and fibula of a human foetus at the fourth month, showing the insertion of the adductor magnus muscle into the head of the tibia. Fig. 6. Outer view of the knee-joint of a gibbon (*Hylobates leu-ciscus*), showing the tendon of the peroneus longus muscle playing the part of the external lateral ligament of the joint. Fig. 7. Posterior view of the same joint to show the rotator fibulae muscle. The popliteus muscle is turned upward and inwards. Fig. 8. A tibia and fibula from sphenodon, showing the peroneo-tibial muscle. The representative of the interosseous membrane in mammals. SOME REMARKS ON NERVOUS EXHAUSTION AND ON VASO-MOTOR ACTION. By F. Le Gros Clark...
